CHAPTER 1

INTRODUCTION

Industrial Training is designed as a platform for students to adapt to the work environment. Industrial Training is also intended for students to apply what they have learned. Recognising the importance of Industrial Training, the School of Multimedia Technology and Communication (SMMTC), College of Arts and Sciences (CAS), Universiti Utara Malaysia (UUM), provides opportunities for students of all programmes to undergo Industrial Training. Industrial Training is one of the compulsory courses for all SMMTC students to fulfil the conferment of **Bachelor of Science (Multimedia) with Honours.**

A. GENERAL INFORMATION

1.1 Industrial Training

The Industrial Training course for the **Bachelor of Science (Multimedia) with Honours** program provides students (or interns) with hands-on experience in a real working environment before graduation. This program bridges theoretical knowledge with practical application, allowing students to develop industry-relevant skills. It also enables organizations ranging from private companies to government agencies and NGOs to share expertise and mentor future professionals. Additionally, the training fosters strong collaborations between UUM and industry partners, creating valuable connections that benefit both students and organizations.

1.2 Industrial Training Regulations

During Industrial Training, the intern is subjected to UUM regulations. The following are the main matters to be aware of:

a) Confirmation of Industrial Training

Student needs to confirm his/her report duty status at the organisation by returning the Report Duty form[1] to the office of CUIC. The student is also required to inform his/her supervisor regarding the status.

Please refer "Item 5.0 Regulations for UUM Industrial Training Programme" for more information.

b) Postponement of Industrial Training

Postponement of Industrial Training is not allowed except for a student who has serious health issues.

Please refer "Item 7.0 Regulations for UUM Industrial Training Programme" for more information.

c) Report Presentation

In preparing the report, student is subjected to Act and Regulations of Academic Treachery from paragraph 12 UUM Act (Examination) 1988. Academic treachery includes any acts that break any examination rules and plagiarizing project papers, academic practice, or any assignments and courses. If found guilty, the Student Discipline Body can execute one or more of the following punishments:

- Warning.
- Fine, not more than RM200.00.
- Suspension from any or all University's facilities in a certain decided period.
- Exclusion from any part of the University in a certain decided period.
- Expulsion from University.

d) Incomplete Grade (*Tidak Lengkap* - TL)

Incomplete Grade (*Tidak Lengkap - TL*) can be applied by the student if he/she has not completed any specific components such as the final report. This application needs to be submitted to the Director of CUIC through the Report Supervisor (SMMTC).

Please refer "Item 12.0 Regulations for UUM Industrial Training Programme" for more information.

e) Disciplines during Industrial Training

A student whose internship has been terminated due to disciplinary issues as confirmed by the supervisor is entitled to get an F grade.

Please refer "Item 16.5 Regulations for UUM Industrial Training Programme" for more information.

1.3 Industrial Training Supervision

The purpose of Industrial Training supervision is to ensure the student is given proper tasks based on his/her industrial training project/research scope. The supervision is conducted by:

- Organisational Supervisor (Employer)
- Report Supervisor (Lecturer)

The following is a list of responsibilities that all students and supervisors must fulfil. Students should courteously remind their supervisors of any necessary actions if needed.

Entity	Responsibilities
Student (or Intern)	1. Discuss job scope and potential projects with the Organisational Supervisor (Employer). 2. Prepare the necessary evaluation forms for the Organisational Supervisor (Employer) (i.e., **Industrial Training (IT) 01 form**) and Report Supervisor (Lecturer) (i.e., **Industrial Training (IT) 02 form**). 3. Update the digital logbook daily and submit it to the Organisational Supervisor (Employer). 4. Setup an online meeting at a time that suit both Organisational Supervisor (Employer) and Report Supervisor (Lecturer) and present the project. 5. Remind the Organisational Supervisor (Employer) to complete the **IT01** form and the market survey for submission to the Report Supervisor (Lecturer). 6. **Complete the alumni survey**. 7. Develop an Industrial Training digital portfolio and submit the link to the Report Supervisor (Lecturer). 8. Submit the project report to the Report Supervisor (Lecturer). 9. Submit the attendance form to the Report Supervisor (Lecturer).

Organisational Supervisor (Employer)	1. Assign a suitable project to the intern and provide supervision throughout the industrial training period. 2. Review and assess the intern's Industrial Training digital logbook. 3. Endorse the intern's Industrial Training attendance form. 4. Evaluate the intern's performance, project, and presentation by completing the **IT01** form, which also includes assessments of ethics, professionalism, leadership, and other relevant criteria. 5. Complete the market survey form. 6. Submit both the **IT01** form and the **completed market survey** to the designated Report Supervisor (Lecturer).
Report Supervisor (Lecturer)	1. Supervise the student throughout the entire Industrial Training period. 2. Monitor the student's Industrial Training project progress. 3. Review and monitor the student's Industrial Training digital logbook. 4. Evaluate the student's Industrial Training project report using the **IT02** form. 5. Assess the student's Industrial Training digital portfolio.

1.4 Industrial Training Activities

Industrial Training activities and phases are as follows:

Phase	Items	Action by	Notes
Before Industrial Training	Student registers at CUIC	Student	Eligible students must be aware of important dates
	Student attends Industrial Training workshop (CUIC & SMMTC)	Student	Compulsory for registered interns
	The student is assigned to the Report Supervisor (Lecturer)	CUIC	Check portal/announcement

	Student meets the Report Supervisor (Lecturer) and provides the Supervisor Evaluation Form (**IT02**) to their respective lecturer.	Student	
During Industrial Training	Student arrives at the organisation	Student	Day 1
	Student submits confirmation of report duty form (i.e., Report Duty Form) to CUIC office	Student	Week 2
	Student discusses job scope, potential project and provides the Employer Evaluation Form (**IT01**) to Organisational Supervisor (Employer)	Student	Week 2
	Student starts the project	Student	Week 4 onwards
	Student updates digital logbook	Student	Daily
	Student presents project findings to the Organisational Supervisor (Employer) and Report Supervisor (Lecturer).	Student	Within 2 weeks before the industrial training ends
After Industrial Training	Organisational Supervisor (Employer) submits the Employer Evaluation Form (**IT01**) and market survey forms to Report Supervisor (Lecturer)	Organisational Supervisor	One week after Industrial Training ends
	Student confirms that the Employer Evaluation Form (**IT01**) has been accepted by the Report Supervisor (Lecturer)	Student	

	Student submits project report, digital portfolio link, attendance form, and alumni survey form to Report Supervisor (Lecturer)	Student	Within two weeks after Industrial Training ends
	Report Supervisor (Lecturer) completes Supervisor Evaluation Form (**IT02**) and enters final marks (**IT01** + **IT02**) in the OBE System	Report Supervisor	Within two weeks after the final document submission

1.5 Other Information

Other information about Industrial Training can also be obtained from the Centre for University-Industry Collaboration (CUIC) website (http://cuic.uum.edu.my) and School of Multimedia Technology and Communications (SMMTC) website (http://smmtc.uum.edu.my/download/).

B. COURSE INFORMATION

The industrial training course for **Bachelor of Science (Multimedia) with Honours** program is SCVXK3958, carrying **8 credits**. Students must complete **16 weeks (4 months)** of industrial training at a chosen organization. Eligibility requires completing all coursework, typically in the **7th semester.**

1.6 Course Learning Outcomes

Upon successful completion of the Industrial Training, interns will be able to:

1. **CLO1** – **Demonstrate** effective interpersonal, leadership, and responsibility skills throughout industrial training duration. **(A3, LOC3f & LOC3b)**
2. **CLO2** – **Adhere** to ethics and professional values throughout the industrial training duration. **(A4, LOC5)**
3. **CLO3** - **Display** effective solutions by employing suitable techniques, skills, and tools to accomplish assigned tasks and complete the industrial training logbook. **(P5, LOC3a) (A5, LOC3c)**
4. **CLO4** – **Propose** knowledge, experiences, and skills gained during industrial training into a well-structured and comprehensive project report. **(C6, LOC2) (A5, LOC3c)**

5. **CLO5** – **Assemble** multimedia digital portfolio that effectively showcases multimedia works. **(C6, LOC3d)**

1.7 Assessment Form

TWO (2) forms are required:

Ref. Code	Name of Form
IT01	**Employer Confidential Report**
IT02	**Supervisor Evaluation Report**

Note:

- **IT01 needs to be filled up by the Organisational Supervisor (Employer) and submitted directly to the Report Supervisor (Lecturer) by the end of the Industrial Training**.
- **IT02 needs to be filled up by the Report Supervisor (Lecturer).**
- Please ensure that information is written completely and clearly on the front page of the forms.

1.8 Evaluation Components

Industrial Training evaluation is divided into **TWO (2)** components:

1) Organisational Supervisor (Employer) Evaluation **60% (CLO1, CLO2, CLO3)**

   - **Intern Assessment**
     Interpersonal Skills (15%) (LOC3b)
     Leadership, Autonomy, Responsibility Skills (10%) (LOC3f)
     Ethics and Professionalism (5%) (LOC5)

   - **Industrial Training Project Evaluation**
     Practical Skills (15%) (LOC3a)

   - **Industrial Training Project Presentation Evaluation**
     Communication Skills (10%) (LOC3c) (Oral)

   - **Industrial Training Digital Logbook**
     Communication Skills (5%) (LOC3c) (Written)

2) Report Supervisor (Lecturer) Evaluation **40% (CLO4, CLO5)**

- **Industrial Training Project Report**
  Cognitive Skills (20%) (LOC2)
  Communication Skills (Written) (5%) (LOC3c)

- **Industrial Training Multimedia Digital Portfolio**
  Digital Skills (15%) (LOC3d)

Students must fulfil all the evaluation components to complete the Industrial Training course.

CHAPTER 2

INDUSTRIAL TRAINING PROJECT SCOPE

A. GENERAL INFORMATION

Students may undertake any project approved by both the Organisational Supervisor (Employer) and the Report Supervisor (Lecturer). Each student must prepare a project report upon completing their Industrial Training. This report is a crucial component of the assessment, contributing 25% to the overall grade. Students are expected to take the report preparation seriously and consult:

- Organisational Supervisor (Employer) to discuss project tasks and expectations.
- Report Supervisor (Lecturer) to ensure the project scope is appropriate

2.1 Project Report Options

Students have **two options** for their project report:

1. **Self-Proposed Project** – Students may propose a project that aligns with their interests or career goals, ensuring it meets the organization's objectives and industry standards.
2. **Employer-Assigned Project** – Students may choose a project provided by their employer, contributing to real-world applications and company-specific needs.

2.2 Defining the Project Scope

Clearly defining the project scope is essential for:

- Understanding the project objectives and assigned tasks.
- Applying theories and skills learned during the program to real-world situations.
- Ensuring no confidential company information is included in the report

B. PROJECT SCOPE AND FORMAT

2.3 Project Scope

Students must determine and define their industrial training project scope in consultation with their Organisational Supervisor (Employer). The project should align with the organization's needs and operations while remaining relevant to the field of Multimedia Technology for meaningful and practical analysis.

A well-defined scope is crucial for:

- Gathering the necessary information for project execution.
- Ensuring a structured and focused approach to development.

Additionally, BSc. with Honors (Multimedia) students must apply an appropriate multimedia project development methodology. Before starting the development phase, students must complete comprehensive project planning and design as required for the project.

The scope of the SCVXK3958 Industrial Training project is as follows but not limited to:

Category	Description	Requirement
Animation	Covers 2D, 3D, graphic animation, video animation, motion graphics, and simulations, focusing on crafting engaging visual narratives.	• Must involve at least one phase of video production: pre-production, production, or post-production. • **3D Animation:** Duration of 2 to 10 minutes. • **2D Animation:** Duration of 2 to 5 minutes.
Game Development	Focuses on creating interactive experiences across platforms, including mobile, desktop, web, AR, and VR.	• Projects should integrate gameplay mechanics, storytelling, and graphics to enhance user engagement
Cinematics / Film / Video	Covers PSA, short films, advertisements, corporate videos, instructional content, documentaries, and promotional videos	• Must involve at least one phase of video production: pre-production, production, or post-production. • Content must reflect the organization's corporate identity, including background, products, and relevant information.
Web / Mobile / Application Content Design	Focuses on designing user-friendly and visually engaging	• Must integrate multimedia elements (text, graphics, video, sound, animation).

	digital interfaces for websites, mobile apps, and software	• Should demonstrate relevant skills such as web design, programming, and database management.
Spatial, Immersive & Interactive Media	Explores AR, VR, MR, metaverse, and 2D/3D interactive media, merging digital and physical environments for education, training, and simulations.	Emphasizes immersion, interactivity, and user engagement through emerging technologies.
Intermedia Advertising	Focuses on delivering consistent brand messaging across TV, digital, print, and social media.	Projects should integrate various advertising channels to enhance brand visibility and audience engagement.

2.4 Project Format

The project format should align with the nature of the organization and the objectives of the project. Students can choose between interactive and non-interactive formats based on organisational needs and the desired level of user engagement.

- **Interactive Formats** (e.g., websites, apps, games, AR/VR) enable active user engagement, making them ideal for projects that involve interaction, decision-making, or exploration.
- **Non-Interactive Formats** (e.g., linear videos, animations, documentaries) present content in a **fixed sequence** without user input, making them suitable for storytelling or informational purposes.

Students should select a format that enhances user experience and effectively supports the project's goals.

Project Format	Descriptions
Interactive Media	Interactive media enables active user participation, allowing users to engage with content rather than passively consuming it. These projects incorporate navigation, decision-making, and user input, creating a dynamic and personalized experience. *Examples of Interactive Media Projects:*

	• **Websites & Mobile Apps** Users can navigate different sections, interact with multimedia content, and perform actions such as clicking, scrolling, and filling out forms. • **Educational Games & Simulations** Interactive learning environments where users solve problems, make decisions, and receive feedback, enhancing engagement and knowledge retention. • **Interactive Videos** Viewers can make choices that influence the storyline or access additional information within the video, creating a more immersive experience. • **Augmented Reality (AR) & Virtual Reality (VR) Experiences** Users interact with digital elements in real or virtual environments, enhancing immersion and engagement through realistic simulations.
Non-Interactive Media	Non-interactive media follows a linear structure, where content is presented in a fixed sequence without user control or interaction. The audience passively consumes the information, making this format ideal for storytelling, information delivery, and broad audience reach. *Examples of Non-Interactive Media Projects:* ● **Documentary Films & Linear Videos** Content unfolds in a predetermined sequence, with viewers watching passively without influencing the storyline. ● **Traditional Advertisements** Pre-recorded promotional videos or commercials that follow a set narrative to convey a message effectively. ● **Animated Presentations & Motion Graphics** Visually engaging content designed to inform or entertain without requiring user interaction.

CHAPTER 3

REPORT WRITING

A. GENERAL INFORMATION

The Industrial Training project report is one of the required components. The report must be prepared based on the defined specifications. The project report will be evaluated by the Report Supervisor (Lecturer). Students who fail to submit the report within the timeframe will be given an Incomplete Grade (TL). Any application for TL grade must get the Report Supervisor's approval. After **EIGHT** (**8) weeks**, the student will be given an F grade if he/she fails to submit the report (please refer to general Industrial Training regulation for TL grade).

3.1 Report Writing Guidelines

The Industrial Training project report can be written either in Bahasa Malaysia or English. The report should not exceed **50 printed pages** excluding appendices. The entire final report must be consistent and uniform. Please refer to **Chapter 4** for the format of the report.

3.2 Report Content

The industrial training project report should consist of **THREE (3)** main parts which are:

Section I: Report introduction
Section II: Body of report
Section III: References/Bibliography and Appendices

All these parts must be orderly organized based on in the following table:

Section	Order	Item	Page Numbering
	1	Title Page (Refer **Appendix A**)	*No page number*
	2	Declaration (Refer **Appendix B**)	
	3	Acknowledgement	

I	4	Disclaimer (Refer **Appendix C**)	Using Roman small letters (starting with iii)
	5	Executive Summary	
	6	Table of Contents	
	7	List of Tables	
	8	List of Figures	
	9	Abbreviations	
II	10	Body of Report Chapter 1: Introduction Chapter 2: Project Description Chapter 3: Overall Experience Chapter 4: Conclusion	Using numbers (starting with number 1)
III	11	References/Bibliography	
	12	Appendices	

3.2.1 Section I: Report Introduction

The report introduction consists of several components (or pages) including a title page, declaration, acknowledgement, disclaimer, executive summary/abstract, table of contents, list of tables, list of figures and abbreviations.

Item	Description
Title Page	This page consists of the following information: i. Full project title (middle of the page) ii. Place of Industrial Training (bottom of the page) ** The title must explain the main project and the maximum length is up to 15 words
Declaration	This page consists of the following items: i. Short declaration statement and course code (at the top page) ii. Student's name and matric number (in the middle of the page)
Acknowledgement	This page contains the acknowledgement to all parties (individuals or institutions) who assist in the project implementation. The acknowledgement must be simple and concise

Disclaimer	This page contains statement to claim validity and copyright of the report contents. Student needs to write down the student's name and matric number.
Executive Summary (Abstract)	Executive Summary is the essence of the whole report and needs to be given a special attention as main text. References should not be cited in the Executive Summary, but if it is necessary, use footnote. Avoid from using any abbreviations or acronyms. Executive Summary should not exceed 300 words. It must contain fact-specific issues, a brief explanation of the project; significance of project findings/outcome and conclusion. This summary should be typed in one paragraph, single spaced, and in only one page.

Example:

> Online management system is one of a web-based application that could help organisations in enhancing their productivity, encouraging greater customer participation, and enabling mass customization, besides reducing costs. Online management system or electronic management can be defined as a process to manage data, information and making communication through the Internet. The process could be implemented in different categories of technology such as real-time system, web-based system, and mobile applications. Thus, the journal management system has great potential to be integrated with the web application. With the need for faster publishing process and complexity of management process, an online management system for journal is proposed.

Table of Contents	Table of Contents should follow the order, with relevant page number, all sections and sub-sections, topics and sub-topics; list of references, acronyms and others overall report function; appendices and indices (if any)

Example:

TABLE OF CONTENTS

Title Page..... i
Declaration ii
Acknowledgement iii
Disclaimer..... iv
Executive Summary..... v
List of Tables vi
List of Figures.....,. vii
Abbreviations ix
1.0 Introduction 1
1.1 Organisation Background 1
1.2 Overall Observation 2
1.3 Chapter Summary.....3
2.0 Project Description 4
2.1 Project Introduction 4
2.2 .....

List of Tables	This list contains all table titles exactly like in the text. The information that needs to be included is table number, table caption and page number.

Example:

List of Tables

Table No.	Caption	Page
Table 1.1	List of computers	2
Table 1.2	…	3
Table x.x	…	

List of Figures	This list includes graphs, figures, maps and other illustrations. The title of the figures must follow the captions of the figures in the report. The information must have a figure number, caption and page number.

Example:

List of Figures

Figure No.	Caption	Page
Figure 1.1	Organisation Chart	5
Figure x.x	…	

List of Abbreviations	This list includes all the abbreviations used in the report. The information includes the abbreviation and the meaning of the abbreviation.

Example:

List of Abbreviations

WWW	World Wide Web
HTML	Hyper Text Mark – Up Language

3.2.2 Section II: Report Body

The body of report should consist of **FOUR (4)** main chapters namely Introduction, Project Description, Overall Experience and Conclusion. At the end of each chapter (except Conclusion), a summary of the chapter should be provided to encapsulate main ideas/body of the chapter.

Item	Description
Chapter 1: Introduction	Introduction should include two main topics: the organisation background and an overall observation of the entire organisation. Organisation background contains basic information such as a brief organisation history, management, objective, organisation mission and vision. Overall observation covers the overall aspect of organisation specialization and roles. Discussion of related topics should not exceed two-pages each respectively.
Chapter 2: Project Description	Chapter 2 covers a detailed explanation on the industrial training project. This chapter consists of **introduction to the project**, project methodology, weaknesses and recommendations. Problem statement of the chosen project, objective, project scope and project significance

	must be explained in the **introduction of the project**. The chosen methodology must be suitable with the project scope. Each phase needs to be explained in detail together with related deliverables. Interns who developed project such as video clips, documentary, and animation must include the storyboard and script under the project planning and design. ** Project design must include description of the technical specifications in the projects.
Chapter 3: Overall Experience	In this chapter, interns will do a reflective writing on their overall experience throughout the Industrial Training. In addition, students need to explain whether the Industrial Training has achieved its objectives and learning outcomes.
Chapter 4: Conclusion	Students need to provide clear and solid conclusions that reflects the project done during the Industrial Training. ** In this chapter, an explanation/description on how the Industrial Training meets the objective should be included.

The following is the breakdown of the report.

Chapter 1: Introduction

a. Organisation Background
b. Organisation Business
c. Chapter Summary

Chapter 2: Project Description

a. Project Introduction
    - Problem Statement
    - Project Objective
    - Project Scope
    - Significance of Project

b. Methodology
c. Finding
d. Discussion
e. Chapter Summary

Chapter 3: Overall Experience

a. Industrial Training Effectiveness
b. Recommendation
c. Chapter Summary

Chapter 4: Conclusion (Summary of the report)

3.2.3 Section III: References

Section III covers the provision of list of references and appendices. Both items are important to provide readers with a referral or obtain additional declaration on the matter.

Item	Description
References	References should follow the format and style provided. Please refer to **Appendix D** for examples.
Appendices	If there are any, appendices need to be attached after the references. Details of the attachment should be listed in the table of contents. Page numbers are needed in every appendix. If there is more than one, use letter A, B, C, and D at the beginning of the title of each appendix.

	Every new appendix must start with a new page. Some good examples for appendices are: ➢ Storyboard ➢ Script ➢ User Manual ➢ Flow Chart ➢ Gantt Chart ➢ Source Code ➢ Organization Chart etc.

3.3 Report Writing Submission

The final report needs to be submitted in **PDF** to the **Report Supervisor (Lecturer)**. For the report cover format, students can refer to **Appendix A**. Students are reminded to submit the report within **TWO (2) weeks** after the Industrial Training ends.

CHAPTER 4

REPORT WRITING FORMAT

A. GENERAL INFORMATION

The Industrial Training report must be prepared and typed clearly. The writing format for the final report must be standardised based on the format given.

4.1 Font Type and Size

Use ***Times New Roman***. Specifications include:

- Font size 12 for the text including the main topics. The main topics must be written in uppercase (capital letters) and should be bold.
- The font size for subtopics is also 12. Write the subtopics in title case and bold.
- The font size for captions on tables and figures is 10.
- Use a word processor that can give you a standard typing format.
- The usage of headers and footers is not allowed.

Example:

1.0 MAIN TOPIC

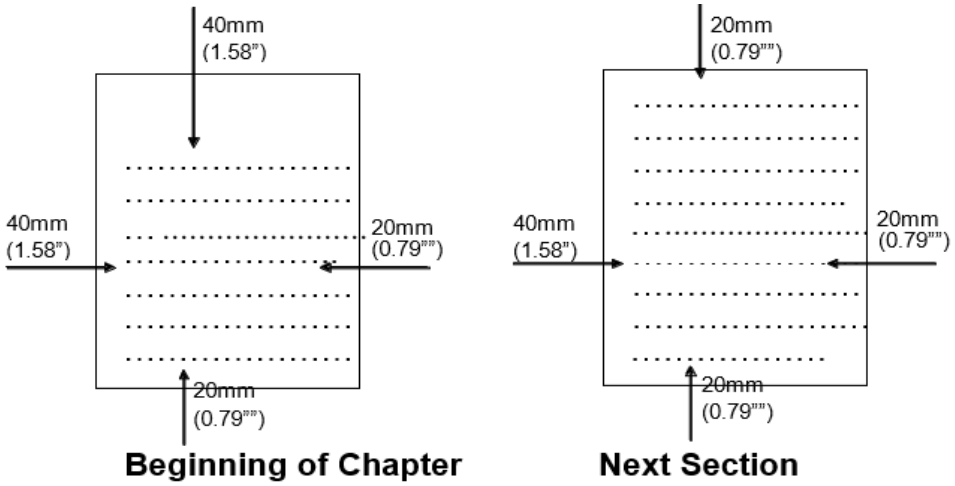

1.1 Subtopic

1.1.1 More Sub-subtopics

1.1.2 More Sub-subtopics

4.2 Margin

The margin on the left-hand side of the report is 40mm (1.58") and 20mm (0.79") on the right, top and bottom sides, except for the beginning of the chapter, where the top margin must be at least 40mm (1.58).

4.3 Heading and Subheading

Use a consistent numbering format (refer to the example below). The position of the subtopics must align with the main topics (no indentation is needed).

Example:

1.0 MAIN TOPIC	… Level 1
1.1 Subtopic for 1.0	… Level 2
1.1.1 Proportion of Subtopic 1.1	… Level 3
a) Proportion for 1.1.1	… Level 4
i) Proportion for a)	… Level 5

4.4 Spacing

The final report must be typed in 1.5 spacing. The main section (chapter) must begin on a new page. The following item must be typed in single spacing:

- Quotation that exceeds three lines
- References
- Table
- Appendices, e.g. questionnaires, letters, etc

4.5 Paging

- Page numbers must be continuously counted. It should be without any brackets, hyphens or other decorations.
- Page numbers before the report's first chapter must be written using small Roman numbers (e.g. i, ii, iii).
- No numbering is needed for the Title Page.
- The page numbering starts from the first page of the report's first chapter.

4.6 Table and Figure

Tables should be labelled in sequence according to the chapter/section in the report and written in title case. The caption for a table is written at the top of the table. The format is as follows:

Table <Chap>. <Table No>:<Name/Table Topic

Example:

Table 5.1: Tabulation of Computer Users in Malaysia"s Northern States

	Perlis	Kedah	Penang
1995	1000	1200	2971
1996	1500	1800	3654
1997	1572	1890	3985
1998	1602	1906	4576
1999	1680	1950	4867
2000	1750	2103	6514
2001	1890	2500	7514
2002	1990	2530	8245
2003	2504	2641	9987

Based on the above example, the caption for the table begins with "**Table 5.1**" which shows that the table is the **first** table in Chapter **5.**

The same goes for figures, except that the caption for a figure is written at the bottom of the figure. The format is as follows:

Figure <Chap>. <Figure No>:<Name/Figure Topic>

Example:

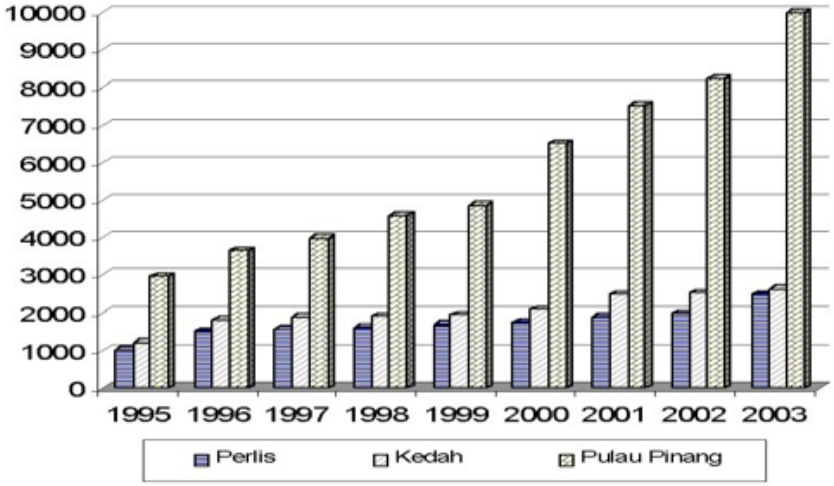

Figure 1.2: Availability of Computers in Malaysia"s Northern States

Based on the above example, the caption for the figure begins with "**Figure 1.2**" which shows that the figure is the **second** figure in **Chapter 1**.

CHAPTER 5

PROJECT REPORT PRESENTATION

A. GENERAL INFORMATION

The project report presentation is an important element of the multimedia internship program. It offers students a stage to highlight their industry experiences, learning achievements, and project contributions. It provides a comprehensive overview of their internship journey by detailing the execution of projects, the technical skills developed, the challenges encountered, and the real-world problem-solving strategies employed. Additionally, this presentation reflects their professional growth and creates an opportunity to receive insightful feedback from both employer and lecturer, ensuring that their experiences meet academic criteria and industry standards.

The primary objectives of this presentation are to:

- highlight the student's practical experience and skills acquired during the internship.
- assess the project's creative and technical aspects as well as its relevance to the company's goals.
- gather feedback from both the employer and lecturer to support the student's growth and understanding.

5.1 Online Presentation:

- **Online Presentation:**
  - The session will be held on an online meeting platform such as Zoom, Webex, or Google Meet.

- **Duration:**
  - The presentation must take place within the **final TWO (2) weeks before the Industrial Training ends**.

- **Session Breakdown:**
  - Presentation: 15 minutes
  - Q&A: 10 minutes
- Students must ensure a smooth session by securing a stable Internet connection, testing all presentation materials in advance, and being well-prepared for questions and feedback during the Q&A.

- **Audience:**
  - The presentation will be delivered in a collaborative online environment with both the employer and lecturer.
  - Students are responsible for coordinating and confirming the presentation date and time with both parties.

- **Assessment:**
  - The employer will assess the presentation.

- **Presentation Slide Structure**

  - **Title Slide:**
    - Project title, student name, date, and organization logo (if applicable).

  - **Introduction:**
    - Organisation background and business overview.

  - **Project Description:**
    - Problem statement
    - Project objective
    - Project scope
    - Project Significance
    - Methodology
    - Project outcome

  - **Overall Experience:**
    - Additional assignments in the organization
    - Effectiveness of the industrial training
    - Key recommendations and suggestions

  - **Conclusion:**
    - Summarize main findings and final thoughts

  - **Q&A Slide:**
    - Invite audience questions and provide contact information for follow-up.

5.2 Online Presentation Best Practices:

- **Ensure a Stable Internet Connection:**
  - Use a wired connection if possible or position yourself close to the Wi-Fi router.

- **Test Audio and Video Equipment:**
  - Use a quality microphone and test your audio beforehand and adjust your webcam for a professional appearance.

- **Familiarize Yourself with the Presentation Software:**
  - Master the features of platforms like Zoom, Webex, Microsoft Teams, or Google Meet (e.g., screen sharing, chat, breakout rooms, recording).

- **Optimize Your Presentation Slides:**
  - Use clear, large fonts and high-contrast colours; minimize text-heavy slides by incorporating visuals, charts, and bullet points.

- **Minimize Distractions and Set Up a Professional Environment:**
  - Choose a quiet location with minimal background noise and use a virtual or clean background if necessary.

- **Have a Backup Plan for Technical Issues:**
  - Keep a second device ready in case of failure and record the presentation as a backup against connectivity issues.

CHAPTER 6

DIGITAL INDUSTRIAL TRAINING LOGBOOK GUIDELINE

A. GENERAL INFORMATION

During Industrial Training, the intern is required to record his/her daily activities at the organization. The intern is advised to always keep the record updated daily. The documentation of the daily activities can be recorded by Digital Logbook such as Digital Industrial Blogging**.**

6.1 Digital Industrial Training Blog

The Digital Industrial Training Blog is a digital platform for documenting and reflecting on student industrial training journeys. It allows students to share weekly updates on tasks, challenges, solutions, and key learnings while showcasing their professional growth. By maintaining a structured blog, students can track progress, receive feedback, and create a valuable portfolio of experiences. Whether public or private, this blog serves as a personal journal and a professional record of their industrial training achievements.

The purpose of writing in digital industrial training blogging is to:

- facilitate students to reflect on their daily tasks, challenges, and accomplishments, fostering a deeper understanding of their industrial training experience.
- allow students to track their progress, identify areas for improvement, and apply feedback to improve their performance in assigned tasks.
- enables supervisors to review students' updates, monitor their learning journey, and provide constructive feedback for professional growth
- serves as a record of work done during the industrial training, which can be showcased to potential employers or used for academic purposes

6.2 Platform Selection

You can choose any of the following platforms to create your industrial training blog:

- WordPress (https://wordpress.com/)

WordPress

- Blogger (https://www.blogger.com/)

- Medium (https://medium.com/)

Depending on the organisational policy, you can make the blog is either public or restricted (accessible via a shareable link) so that your supervisor can review your progress.

6.3 Blog Structure & Posting Requirement (Blogging Format)

Each blog post should include the following **6 components:**

1. **Date & Task Title –** Provide the date and the title for the task conducted

2. **Task Description** – Describe the tasks or activities conducted/completed.

   Example:

   "Today, I worked on designing a user interface for a mobile application using Figma. I learned how to use constraints to make the design responsive. Additionally, I studied UI/UX best practices to improve user experience.

3. **Challenges & Solutions** – Describe any difficulties faced and how they were resolved.

   Example:

   "I struggled with API integration while working on the backend of the project. After researching, I found a helpful tutorial on RESTful APIs and consulted my supervisor, who suggested debugging with Postman. This helped me identify errors and implement the API successfully."

4. **Key Learnings & Skills Gained** – Highlight new knowledge or techniques acquired.

   Example:

   " This industrial training has improved my ability to collaborate with a team remotely. I have also learned the importance of version control when working on group projects"

5. **Supporting Materials** – Attach relevant images, screenshots, code snippets, videos, links, or related documents as evidence.

6. **Reflection & Next Steps** – Summarize personal insights and outline upcoming tasks or goals.

6.4 Blog Formatting and Presentation

- Use clear headings and bullet points for better readability.
- Keep posts professional, concise, and well-structured.
- Include relevant links or references to support your content.
- End each post with a reflection on what was learned and future improvements**.**

6.5 Blog Submission and Review Process

Step	Description	Action Required
Create a Blog and Obtain a URL	Create the blog, get the URL for it, and set the preferences for the blog.	Interns need to create the Internship blog and obtain the URL. Set the blog to either public or restricted. By using an email, add the Organisational Supervisor and Lecturer as reviewers or subscribers (An email will be sent to notify new blog posts; Look at the "Email Subscription" or "Notification" Section). Assessment of the digital logbook will be done by the Organisational Supervisor.
Blog Post	Share the blog link with the report supervisor at the beginning of the industrial training. This ensures they can monitor the progress throughout the industrial training period.	Interns need to ensure regular posts (daily) and incorporate any feedback given to enhance documentation quality.
Periodic Reviews	The organisational Supervisor may conduct periodic reviews to ensure that students are consistently updating the blog with the required components. Feedback may be provided for improvements.	The Organisational Supervisor needs to review the post and provide any feedback (in the comment section) to enhance documentation quality.
Content Quality Check	Posts should be clear, well-structured, and professional. Each post must include task summaries, challenges, solutions, key learnings, feedback received, and reflections.	Follow the blogging format guidelines and maintain professional writing throughout. Use images, screenshots, or links where relevant.
Final Summary Post	At the end of the industrial training, students must write a final reflection post summarizing key achievements, lessons learned, and how the industrial training has contributed to their career goals.	This post should be well-organized, highlighting your overall experience, skills acquired, and future applications of what students have learned.

CHAPTER 7

MULTIMEDIA DIGITAL PORTFOLIO GUIDELINE

A. GENERAL INFORMATION

The **Multimedia Digital Portfolio** is a comprehensive digital showcase of your work and achievements throughout the internship program. It is a dynamic and engaging platform to document and present your skills, creativity, and professional growth in multimedia. Unlike traditional portfolios, this interactive format allows viewers to experience your work through multimedia elements such as videos, images, audio, animations, and interactive content. This portfolio is not just a collection of projects, but it is also a reflection of your ability to design and communicate ideas effectively using multimedia technologies. It provides a unique opportunity to demonstrate your proficiency in using industry-standard tools, creative problem-solving, and storytelling techniques.

The primary objectives of creating this multimedia digital portfolio are:

1. Showcase your contributions and learning experiences during the internship program.
2. Highlight technical expertise in multimedia design, development, and interactivity.
3. Present the multimedia work in a visually appealing and well-structured digital format.
4. Provide an engaging user experience through dynamic content and seamless navigation, which is useful in showcasing works and experiences

7.1 Multimedia Digital Portfolio Format (Interactive Presentation)

The multimedia digital portfolio should be presented in an interactive format that offers an engaging and user-friendly experience. This format allows viewers to navigate the portfolio seamlessly and explore the completed projects and content dynamically. It is essential to

incorporate various multimedia elements such as high-quality images, embedded videos, audio clips, and animations to enhance interactivity and visual appeal especially when documenting the development process of the project or any multimedia works. Features like clickable buttons, hover effects, and navigation menus can help make the portfolio more engaging. Ensure that the portfolio layout is intuitive, with well-organized sections that clearly highlight your work and accomplishments. The design should be visually cohesive, maintaining consistency in colour schemes, typography, and branding elements throughout the portfolio.

7.2 Platform Suggestion (Web Builder)

For creating an interactive multimedia portfolio, using a web builder platform is highly recommended. Web builders offer pre-designed templates, drag-and-drop functionality, and customization options that make it easier to design a professional and aesthetically pleasing portfolio without requiring extensive coding knowledge**.**

Platforms like **Wix, WordPress** (with Elementor), and **Webflow** are excellent choices as they support multimedia content and interactive features. **Squarespace** is another platform known for its elegant and responsive designs. For students who prefer a simpler option, **Google Sites** provides an easy-to-use and free alternative**.**

7.2.1 Comparison Table of Web Builders for Multimedia Digital Portfolio

Platform	Key Features	Multimedia Support	Customization Options	Pricing	Best For
Wix	Drag-and-drop interface, customizable templates, image sliders, video backgrounds, buttons	Excellent (images, video, audio, galleries)	High (full creative control, pre-designed elements)	Free with Wix branding; premium plans for custom domains	Beginners, students who want creative freedom without coding
WordPress (with Elementor)	Open-source, vast plugin library, Elementor drag-and-	Excellent (images, video, audio, animations)	High (plugins, custom code, Elementor options)	Free (requires hosting); premium plans for	Students seeking flexibility, design control, and

	drop builder, multimedia integration			advanced features	advanced features
Webflow	Professional design, clean code generation, responsive design, custom animations, CMS	Excellent (advanced multimedia features, interactions)	Very High (complete control over design and interactions)	Free plan with limited features; paid plans with full features	Advanced users, UI/UX design or web development students
Squarespace	Elegant pre-designed templates, integrated e-commerce, SEO optimization, multimedia galleries	Good (images, video, audio, galleries)	Moderate (limited customization compared to others)	No free plan; subscription-based with various tiers	Students focused on aesthetics and simplicity in design
Google Sites	Simple to use, integrates with Google Drive, basic customization options	Basic (images, video, documents)	Low (limited customization options)	Free (requires Google account)	Beginners or students with limited time and resources

When selecting a web builder, students should consider the platform's compatibility with multimedia elements, responsiveness on different devices, and sharing options for public or restricted viewing. Testing the portfolio on multiple devices and browsers is essential to ensure a seamless viewing experience. Students are encouraged to personalize their portfolios to reflect their creative identity while maintaining a professional presentation that effectively showcases their internship work.

7.2.2 Multimedia Digital Portfolio (Web Builder) Guideline

- **Choose the Right Web Builder Platform**
  Select a user-friendly web builder that supports multimedia elements and interactive features, such as Wix, WordPress, Webflow, or Squarespace. Ensure the platform is mobile-responsive and allows easy content updates.

- **Plan the Portfolio Structure**
  Outline key sections such as Home, About, Projects, Skills, Blog/Reflections, and Contact. Maintain a logical flow to guide viewers through your content seamlessly.

- **Use a Consistent Design Theme**
  Maintain visual consistency in colours, typography, and layout. Choose a clean, professional theme that enhances readability and complements your multimedia work.

- **Incorporate Interactive Elements**
  Use buttons, hover effects, clickable project cards, and navigation menus to engage viewers. Interactive content such as image sliders, collapsible sections, and embedded media enhances user experience.

- **Showcase Multimedia Content Effectively**
  Include a variety of media such as videos, animations, audio, and high-quality images. Ensure media files are optimized for fast loading without compromising quality.

- **Provide Descriptive Project Details**
  For each project, include information such as title, objectives, tools used, your role, and outcomes. Accompany descriptions with relevant multimedia to provide context and impact.

- **Document and Showcase the Creative Process**
  Students are recommended to document the development process of each multimedia project, including sketches, storyboards, design iterations, software tools used, and challenges encountered.

- **Optimize Navigation for User Experience**
  Create a simple and intuitive navigation menu that allows easy access to all sections. Include a search bar or breadcrumbs for better navigation if the content is extensive.

7.2.3 Criteria for Assessment

The Digital Portfolio will be assessed only based on the digital skills demonstrated through the uploaded and described digital content. The evaluation will focus on the quality, creativity, and technical execution of the digital work presented. Describe each digital design/solution with problem identification, methods and tools used, and other suitable information.

Please note that the development, design, or structure of the digital portfolio itself will not be assessed. Students should ensure that their portfolio effectively showcases their digital skills through well-organized and clearly described content.

Assessment & Review:

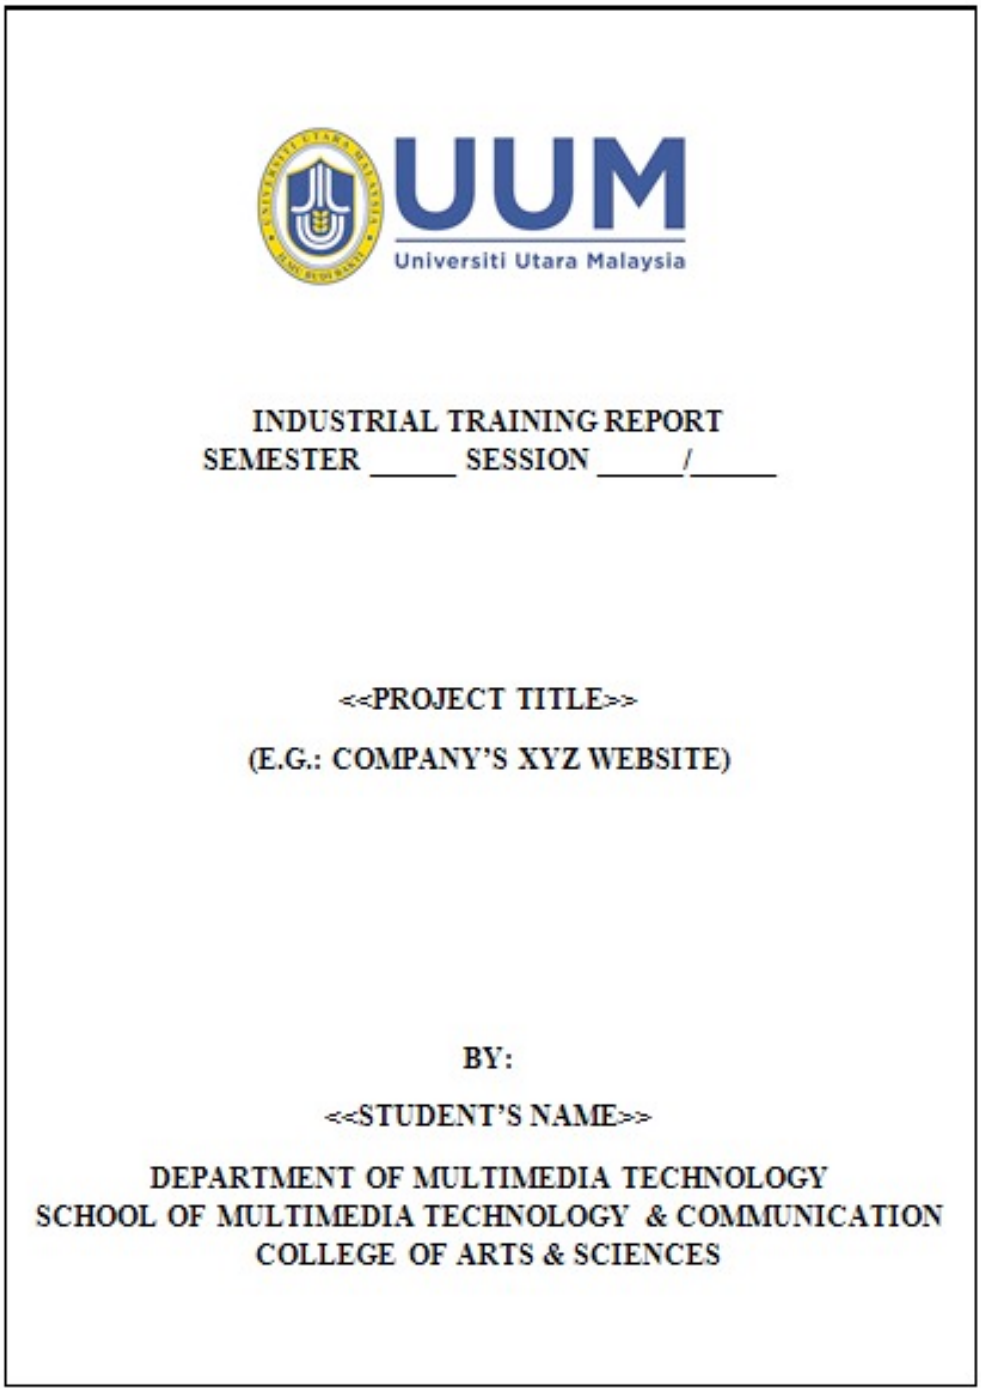

- The lecturer will evaluate the digital portfolio using the Digital Skill Rubric provided.
- The employer may review the portfolio to gain insights into the student's digital competencies and capabilities but will not assign any marks.

Students are encouraged to showcase their best portfolio/work to demonstrate their expertise effectively.

APPENDIX D

REFERENCE FORMAT AND STYLE

A. GENERAL INFORMATION

All references must be relevant, cited and placed after the **final chapter of the report**. Each reference must be consistent and follow the writing practices procedures below:

Each entry must start at the left margin with the second line indented four spaces and in single spacing (refer example). If there are more than two works by one author, the repetition name can be avoided by replacing with continuous line throughout 8 columns (space) start at left margin. If the author is unknown, the entries are arranged according alphabetically (excluding "The","A" and others).

Citation in the Text

Entries in the reference should follow the following formats:

APA Format (7th Edition) (http://www.apastyle.org @ https://apastyle.apa.org/style-grammar-guidelines/paper-format/page-header).

The examples of APA style format are as follows:

Book, one author
McKibben, B. (1992). The age of missing information. New York, NY: Random House.

Book, multiple authors
Larson, G. W., Ellis, D. C., & Rivers, P. C. (1984). Essentials of chemical dependency counselling. New York, NY: Columbia University Press.

Edited book (editor in place of author)

Inness, S. A. (Ed.). (1998). Delinquents and debutantes: Twentieth-century American girls' cultures. New York, NY: New York University Press.

Journal Article (continuous pagination throughout volume), more than seven authors:

Caselli, D., Carraro, F., Castagnola, E., Ziino, O., Frenos, S., Milano, G. M., . . .Aric, M. (2010).Morbidity of pandemic H1N1 influenza in children with cancer. Pediatric Blood & Cancer, 55, 226-228. doi:10.1002/pbc.22619
